

Supplementary Figure S2: additional example of color labeling

Figure S2. Example of color labeling for blue-bias images, randomly chosen from samples in the experiment, with and without taking blue-bias into account. Each figure consists of three parts; from left: original image (resized to 256 x 256 pixels), label without taking blue-bias int account (non-blue bias label), and label with blue bias (blue bias labels). Note, these images were used only in the blue-bias training, and the non-blue bias labels (center) for the blue-bias images were never used in the experiment.
